

3-in-1 Trixi™ Program

The Future of Mixed Baskets and Containers

Product attributes:

A mixed rooted liner program combining three different varieties per liner, using one crop or mixing different crops. Liners are pinched and ready to grow for a quick finish. Choose from 17 different recipes or mix your own by combining different Trixi recipes together. Suitable for use in baskets, containers, pots, and gallons. Trixi tolerates rain, provides long color, and is an easy to care for crop.

Assortment:

'Ayers Rock':

Calibrachoa MiniFamous™ Tangerine
Lobelia Magadi™ Basket Dark Purple
Verbena Fuego™ Bright Red

'Berry Fields':

Calibrachoa MiniFamous™ Royal Blue
Lobelia Magadi™ Electric Blue
Verbena Lascar™ Compact Burgundy

'Blueberry Parfait':

Bacopa Big Pearl Falls
Calibrachoa MiniFamous™ Lavender Blue
Verbena Lascar™ Light Pink

'Caribbean Cocktail':

Calibrachoa MiniFamous™ Dark Blue
Calibrachoa MiniFamous™ Scarlet
Calibrachoa MiniFamous™ Tangerine

'Double Delight':

Calibrachoa MiniFamous™ Double Lemon
Lobelia Magadi™ White
Verbena Lascar™ Compact Burgundy

'Gold & Bold':

Calibrachoa MiniFamous™ Deep Yellow
Calibrachoa MiniFamous™ Electric Purple
Calibrachoa MiniFamous™ Royal Blue

'Lemon Sorbet':

Bidens Namid™ Compact Yellow
Calibrachoa MiniFamous™ Tangerine
Petunia Fame™ Yellow

'Liberty Bell':

Calibrachoa MiniFamous™ Compact Dark Blue
Petunia Fame™ Fire
Verbena Lascar™ Compact White

'Lollipop':

Calibrachoa MiniFamous™ Compact Dark Blue
Calibrachoa MiniFamous™ Compact Safran
Calibrachoa MiniFamous™ Pink

'Melon Sorbet':

Bacopa Big White Falls
Calibrachoa MiniFamous™ Compact Watermelon
Calibrachoa MiniFamous™ Coral Pink

'Old Glory':

Calibrachoa MiniFamous™ Compact White
Calibrachoa MiniFamous™ Dark Blue
Calibrachoa MiniFamous™ Vampire

'Paso Doble':

Bacopa Big White Falls
Calibrachoa MiniFamous™ Electric Purple
Lobelia Magadi™ Basket Dark Purple

'Purple Heart':

Bacopa Big White Falls
Petunia Famous™ Violet Picotee
Verbena Fuego™ Dark Violet

'Spring Valley':

Calibrachoa MiniFamous™ Compact Orange
Calibrachoa MiniFamous™ Lavender Blue
Lobelia Magadi™ White

Assortment (continued):

'Sunrise':

Calibrachoa MiniFamous™ Compact Dark Red
Calibrachoa MiniFamous™ Compact Orange
Calibrachoa MiniFamous™ Compact Safran

'Twinkle Star':

Bacopa Big Pearl Falls
Bidens Namid™ Compact Yellow
Calibrachoa MiniFamous™ Dark Blue

'Tequila Sunrise':

Calibrachoa MiniFamous™ Apricot Red Eye evol.
Calibrachoa MiniFamous™ Double Lemon
Calibrachoa MiniFamous™ Vampire

Uses:

Trixi™ is great for high-impact combos in baskets, containers, pots, and gallons.

Grower Info:

Pot sizes: depending on the season, calculate for quarts and 6-inch using 1 liner per pot. For gallons and 8-inch pots, use 2 liners per pot. For 10-inch baskets, use 2-3 liners, and for 12-inch baskets, use 3-4 liners per pot.

Planting: depending on the time of season and the desired size, see crop time below. TrixiLiner™ is pinched and a 2nd pinch is recommended – avoid stretch.

Soil mix: choose a well-drained, aerated, peat-moss-based media.

Temperature: keep the temperature up. Maintain night temperatures of 61-64° F (16-18 °C) and day temperatures of 68-72° F (20-22° C) until plants have nicely branched. Afterwards, lower temperatures to 55-60° F (13-16 °C) and day temperatures of 64-72° F (18-22° C). Cool morning drops will result in a better plant habit and nicer colors. Drop temperature 2 hours before sunrise by 8-12° F (4-6° C) until about 2 hours after sunrise. Flowering will not be delayed as long as the average day temperature is maintained consistently. In order to keep the average day temperature up during cold and cloudy days, you may want to raise the night temperature. Toward the end of the crop you can lower the temperature further to 55-60° F (13-16° C) day and night.

Light: high light levels promote compact growth. Provide 4,000- to maximum 5,000-foot candles during the main growing period.

Crop time: TrixiLiner™ is a quick-to-finish crop and should not be started too early. Consider the climate for your specific area and how it may influence scheduling; know your desired sales date. For quarts and 6-inch pots, calculate 5 to 7 weeks. For gallons and 8-inch pots, calculate 5 to 7 weeks as well. For 10-inch and 12-inch baskets, calculate 8 to 12 weeks, depending on the time of season and the desired size.

PGR: sprays with 2,500 PPM B-Nine or 5-20 PPM Sumagic can start about a week after transplant. Drenching TrixiLiner™ works very well. For pots, use 0.25-0.5 PPM Sumagic as a drench the moment side shoots are about 1-inch long. Apply the drench before lowering the temperature of the crop. Baskets will get one or two more sprays when side shoots are about 1-inch long. Drench baskets with 2-4 PPM Bonzi when plants reach about 50-75% of the desired size. More spray application or a second drench application can be applied if necessary. For very vigorous mixes, increasing the drench rates is recommended. Late PGR applications may delay the crop, especially when using B-Nine or Florel. See our "PGR Strategies for Trixi" tech sheet for more information about plant growth regulation.

Consumer/Retail info:

Welcome spring with bright color and a new look for beautiful bold mixed baskets and containers. 17 proven mixes of 3 complementing varieties grow together in harmony for instant color creating high-impact combos as never seen before! All mixes are matched for color, habit, vigor and flower timing.
